HTD-8822-FLP -Heat Detector

Introduction :

Ambtronics Heat Detectors are highly reliable & accurate thermal detection devices. They are used to sense overheat or fire in form of Temperature rise for a particular application.

The Heat Detector is a Device which is capable of detecting Rise in Ambient Temp. and providing an actuating signal i.e. an alarm to alert the system and to actuate a precautionary measure.

Fixed Temperature Heat Detectors are factory preset to a particular temperature (according to the customer's requirement) When connected to system, if temperature rises above the temperature set point, the Heat Detector will be activated.

Features :

- Provides a fast & reliable response by sensing heat build-up i.e. Overheat in Ambient Temp.
- Auto-reset Operation. Reset itself after Temp. cool down.
- User Friendly, Plug and Play operation, easy testing.
- Visual display indication and also dedicated Hooter cum Flasher port.
- Factory Preset to required Temp.
- Wide ranges of Temp. 40°C to 210°C
- Low power consumption (<3W).
- No maintenance, No calibration.
